

**Suggestions of
Scientific Research Center "IKAR" (Izhevsk)
for the elimination of the coronavirus epidemic**

The epidemic of the coronavirus and economic crisis that has captured the entire planet requires urgent and decisive measures to combat this threat. From open sources of information, it is known that all the efforts of foreign and Russian medicine (in the Novosibirsk center "Vector") are mainly aimed at the development of new antiviral vaccines. As historical experience shows, viruses mutate very quickly, so you should consider other ways and methods of dealing with epidemics at the gene level.

We offer unique developments of SRC "IKAR» (1990-2020 г.г.) to fight a pandemic - **resonant systems** of **environmental safety, prevention and treatment**, awarded prestigious **international and native awards**.

The basis of the development is the **theoretical** and **experimental** discovery of nuclear and electronic **spin isomers** (SI) in low-temperature (cold) plasma - liquids and gases (**disinfectants, drinking water, anolytes, catholytes, air ions**) in a nonequilibrium thermodynamic state (**NTS**). It is the environment (air and water) polluted by viruses that leads to the spread and survival of viruses and to an epidemic. **Numerous studies** of ionized air and water, their **aerosols**, have proven almost 100% of their super effectiveness and safety for **the prevention, diagnosis and treatment** of animals and people.

The proposed resonant technologies and devices during their large-scale replication will allow not only to begin a quick exit from the current situation, with the prevention of similar situations in the future, but also to get out of **the protracted global economic crisis** at the forefront in the world.

SRC «IKAR» management ready to jointly expand the production of already manufactured unique equipment that has no analogues in the world, with a view to its use not only in medicine, but also in industry, agriculture, housing, economy and other industries (see Applications).
